

SPLIT ROCK RIVER LOOP

The closure will begin September 1st, 2024.

The eastern side of the Split Rock River Loop will close September 1 and impact 1.8 miles of the main SHT corridor between the western junction of the spur trail to the Split Rock River Wayside Trailhead and the river crossing at the top of the loop.

Trail users will be able to bypass the closed section on spur trails, the same reroute suggested when the river is running too high to ford safely. This closure includes the Southeast and Northeast Split Rock River Campsites. Overnight trail users should plan to use a different campsite on this section for the duration of the closure.
